

Package ‘DataQualityDashboard’

March 10, 2023

Type Package

Title Execute and View Data Quality Checks on OMOP CDM Database

Version 2.1.2

Date 2023-03-10

Maintainer Katy Sadowski <sadowski@ohdsi.org>

Description An R package for assessing data quality in standardized OMOP Common Data Model data sources.

License Apache License (>= 2)

VignetteBuilder knitr

URL <https://github.com/OHDSI/DataQualityDashboard>

BugReports <https://github.com/OHDSI/DataQualityDashboard/issues>

Depends R (>= 3.2.2),
DatabaseConnector (>= 2.0.2)

Imports magrittr,
ParallelLogger,
dplyr,
jsonlite,
rJava,
SqlRender (>= 1.6.0),
plyr,
stringr,
rlang,
tidyselect

Suggests testthat,
knitr,
rmarkdown,
markdown,
shiny,
ggplot2,
Eunomia,
R.utils

Remotes ohdsi/Eunomia

RoxygenNote 7.2.2

Encoding UTF-8

R topics documented:

executeDqChecks	2
listDqChecks	4
reEvaluateThresholds	4
viewDqDashboard	5
writeJsonResultsToCsv	5
writeJsonResultsToTable	6
Index	7

executeDqChecks	<i>Execute DQ checks</i>
-----------------	--------------------------

Description

This function will connect to the database, generate the sql scripts, and run the data quality checks against the database.

Usage

```
executeDqChecks(
  connectionDetails,
  cdmDatabaseSchema,
  resultsDatabaseSchema,
  vocabDatabaseSchema = cdmDatabaseSchema,
  cdmSourceName,
  numThreads = 1,
  sqlOnly = FALSE,
  outputFolder,
  outputFile = "",
  verboseMode = FALSE,
  writeToTable = TRUE,
  writeTableName = "dqdashboard_results",
  writeToCsv = FALSE,
  csvFile = "",
  checkLevels = c("TABLE", "FIELD", "CONCEPT"),
  checkNames = c(),
  cohortDefinitionId = c(),
  cohortDatabaseSchema = resultsDatabaseSchema,
  tablesToExclude = c("CONCEPT", "VOCABULARY", "CONCEPT_ANCESTOR",
    "CONCEPT_RELATIONSHIP", "CONCEPT_CLASS", "CONCEPT_SYNONYM", "RELATIONSHIP", "DOMAIN"),
  cdmVersion = "5.3",
  tableCheckThresholdLoc = "default",
  fieldCheckThresholdLoc = "default",
  conceptCheckThresholdLoc = "default"
)
```

Arguments

connectionDetails

A connectionDetails object for connecting to the CDM database

cdmDatabaseSchema	The fully qualified database name of the CDM schema
resultsDatabaseSchema	The fully qualified database name of the results schema
vocabDatabaseSchema	The fully qualified database name of the vocabulary schema (default is to set it as the cdmDatabaseSchema)
cdmSourceName	The name of the CDM data source
numThreads	The number of concurrent threads to use to execute the queries
sqlOnly	Should the SQLs be executed (FALSE) or just returned (TRUE)?
outputFolder	The folder to output logs, SQL files, and JSON results file to
outputFile	(OPTIONAL) File to write results JSON object
verboseMode	Boolean to determine if the console will show all execution steps. Default is FALSE
writeToTable	Boolean to indicate if the check results will be written to the dqdashboard_results table in the resultsDatabaseSchema. Default is TRUE
writeTableName	The name of the results table. Defaults to 'dqdashboard_results'.
writeToCsv	Boolean to indicate if the check results will be written to a csv file. Default is FALSE
csvFile	(OPTIONAL) CSV file to write results
checkLevels	Choose which DQ check levels to execute. Default is all 3 (TABLE, FIELD, CONCEPT)
checkNames	(OPTIONAL) Choose which check names to execute. Names can be found in inst/csv/OMOP_CDM_v[cdmVersion]_Check_Descriptions.csv. Note that "cdmTable", "cdmField" and "measureValueCompleteness" are always executed.
cohortDefinitionId	The cohort definition id for the cohort you wish to run the DQD on. The package assumes a standard OHDSI cohort table called 'Cohort' with the fields cohort_definition_id and subject_id.
cohortDatabaseSchema	The schema where the cohort table is located.
tablesToExclude	(OPTIONAL) Choose which CDM tables to exclude from the execution.
cdmVersion	The CDM version to target for the data source. Options are "5.2", "5.3", or "5.4". By default, "5.3" is used.
tableCheckThresholdLoc	The location of the threshold file for evaluating the table checks. If not specified the default thresholds will be applied.
fieldCheckThresholdLoc	The location of the threshold file for evaluating the field checks. If not specified the default thresholds will be applied.
conceptCheckThresholdLoc	The location of the threshold file for evaluating the concept checks. If not specified the default thresholds will be applied.

Value

If sqlOnly = FALSE, a list object of results

listDqChecks	<i>List DQ checks</i>
--------------	-----------------------

Description

Details on all checks defined by the DataQualityDashboard Package.

Usage

```
listDqChecks(
  cdmVersion = "5.3",
  tableCheckThresholdLoc = "default",
  fieldCheckThresholdLoc = "default",
  conceptCheckThresholdLoc = "default"
)
```

Arguments

cdmVersion	The CDM version to target for the data source. By default, 5.3 is used.
tableCheckThresholdLoc	The location of the threshold file for evaluating the table checks. If not specified the default thresholds will be applied.
fieldCheckThresholdLoc	The location of the threshold file for evaluating the field checks. If not specified the default thresholds will be applied.
conceptCheckThresholdLoc	The location of the threshold file for evaluating the concept checks. If not specified the default thresholds will be applied.

reEvaluateThresholds	<i>Re-evaluate Thresholds</i>
----------------------	-------------------------------

Description

Re-evaluate an existing DQD result against an updated thresholds file.

Usage

```
reEvaluateThresholds(
  jsonFilePath,
  outputFolder,
  outputFile,
  tableCheckThresholdLoc = "default",
  fieldCheckThresholdLoc = "default",
  conceptCheckThresholdLoc = "default",
  cdmVersion = "5.3"
)
```

Arguments

jsonFilePath	Path to the JSON results file generated using the execute function
outputFolder	The folder to output new JSON result file to
outputFile	File to write results JSON object to
tableCheckThresholdLoc	The location of the threshold file for evaluating the table checks. If not specified the default thresholds will be applied.
fieldCheckThresholdLoc	The location of the threshold file for evaluating the field checks. If not specified the default thresholds will be applied.
conceptCheckThresholdLoc	The location of the threshold file for evaluating the concept checks. If not specified the default thresholds will be applied.
cdmVersion	The CDM version to target for the data source. By default, 5.3 is used.

viewDqDashboard	<i>View DQ Dashboard</i>
-----------------	--------------------------

Description

View DQ Dashboard

Usage

```
viewDqDashboard(jsonPath, launch.browser = NULL, display.mode = NULL, ...)
```

Arguments

jsonPath	The path to the JSON file produced by executeDqChecks
launch.browser	Passed on to shiny::runApp
display.mode	Passed on to shiny::runApp
...	Extra parameters for shiny::runApp() like "port" or "host"

writeJsonResultsToCsv	<i>Write JSON Results to CSV file</i>
-----------------------	---------------------------------------

Description

Write JSON Results to CSV file

Usage

```
writeJsonResultsToCsv(
  jsonPath,
  csvPath,
  columns = c("checkId", "failed", "passed", "isError", "notApplicable", "checkName",
    "checkDescription", "thresholdValue", "notesValue", "checkLevel", "category",
    "subcategory", "context", "checkLevel", "cdmTableName", "cdmFieldName", "conceptId",
    "unitConceptId", "numViolatedRows", "pctViolatedRows", "numDenominatorRows",
    "executionTime", "notApplicableReason", "error", "queryText"),
  delimiter = ",",
)
```

Arguments

jsonPath	Path to the JSON results file generated using the execute function
csvPath	Path to the CSV output file
columns	(OPTIONAL) List of desired columns
delimiter	(OPTIONAL) CSV delimiter

```
writeJsonResultsToTable
```

Write JSON Results to SQL Table

Description

Write JSON Results to SQL Table

Usage

```
writeJsonResultsToTable(
  connectionDetails,
  resultsDatabaseSchema,
  jsonFilePath,
  writeTableName = "dqdashboard_results",
  cohortDefinitionId = c()
)
```

Arguments

connectionDetails	A connectionDetails object for connecting to the CDM database
resultsDatabaseSchema	The fully qualified database name of the results schema
jsonFilePath	Path to the JSON results file generated using the execute function
writeTableName	Name of table in the database to write results to
cohortDefinitionId	If writing results for a single cohort this is the ID that will be appended to the table name
